Caelus Energy Alaska, LLC	9

What is this? The polygons shown on this map are intended to represent the permit area submitted with 3D seismic multiple land use permits (MLUPs). DOG currently has an ongoing effort to QC and integrate polygons from historic 3D seismic permits. The effort is expected to result in a map which is ultimately interactive and will allow for the filtering and display of polygon area and placement with links to associated data. In the mean time we thought it might be useful to display what we have - some polygons without QC and most unadjudicated while we move toward a more refined product. What do you get here? The polygons are meant to define the permit area in which 3D seismic might be acquired. The area ultimately covered with data is often smaller than the application polygon. It is possible that data is never acquired in the permitted area. Nonetheless, we offer a potential starting place to determine where data may have been shot, the year the permit was filed and the name of the permittee. Armed with this data you can begin the search for a contact to give you some detail if data was acquired in your area of interest.
