Re: Tenth Plan of Development  
Nikaitchuq Unit, North Slope Alaska

Dear Kevin:

Pursuant to your request, below is supplemental information to be included in Eni's Tenth Plan of Development for the Nikaitchuq Unit filed on behalf of Eni US Operating Co. Inc., as unit operator.

The following information to be added to and made a part of Section of 1.3 (Drilling):

- Rig activity from the end of 2015 through 2016 consisted of production well rig workovers.
- During the period from mid-2016 to mid-2017, four rig workovers were performed on the Spy Island Drillsite. These rig workovers were all electric submersible pump replacements in order to maintain production. The workover campaign was completed in May. After that point, rig modifications were started on Doyon 15 in preparation for a planned exploration well.

The following information to be added to and made a part of Section 2. 2.1 (Facilities):

- The train 1 work had no production impact associated with the shutdown.
- The 2018 shut down is currently estimated at a total 60,000 bbl. impact (72 hour Production deferral).

The following information to be added to and made a part of Section 2.3 (Drilling):

Oliktok Point Activity –

Depending on production well performance and ESP reliability, up to three workovers could be performed at the OPP, during the 10<sup>th</sup> POD.

eni us operating

Spy Island Activity -

Production well maintenance and rig workovers for ESP replacements, as necessary, will continue on Spy Island as a part of the 10<sup>th</sup> POD. As compared to historical data, this could include up to four ESP replacement rig workovers.

Sincerely,

Robert Province
